NATURE AND EXTENT OF INVOLMENT OF FACULTY AND STUDENTS IN ACADEMIC AFFAIRS/IMPROVEMENTS.

The aim of education is to produce the complete man. And the complete man is one who possesses a specialized knowledge of any branch of learning along with an awareness of human obligations. In other words, he should be good in his profession and at the same time be an ideal citizen. This is possible only when the students and teachers perform their duties dedicatedly, attentatively and honestly.

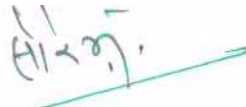

The most desirable and significant role in the improvement of academics that the students can play is to be better students. Students ought to be good students before they can be anything else. They should develop genuine interest for a subject and then study it with a spirit of dedication. If we want to improve our academic position then the teachers will also have to handle their students seriously. The teacher should be able to strengthen the following desirable attributes to his students:

- ❖ Initiative: a self starter; able to work without constant supervision
- ❖ Responsibility: able to accept the responsibilities readily
- ❖ Punctuality: able to do right things on right time
- ❖ Commitment
- ❖ Loyalty
- ❖ Development: To keep knowledge up to date.
- ❖ Communication Skills
- ❖ Presentation Skills
- ❖ Team Work
- ❖ Leadership: The Leaders Are Not Born They Are Made

Besides this the teachers should always try to maintain Cordial relations with their students even outside the class room.

The most important shortcoming of today is that no effort is made to turn the students into fine human beings. So the teacher should always try to provide spiritual training to their students. Only by following all these rules we can develop:

“That education by which character is formed, strength of mind is increased, intellect is expanded and by which one can stand on one’s own feet.”
